STATEWIDE CAREER/TECHNICAL EDUCATION COURSE ARTICULATION REVIEW MINUTES

Articulation Agreement Identifier: ELM 201 (2011-1) Identifier is the postsecondary course prefix followed by Plan-of-Instruction version number (e.g.; INT 100 (2005-1)).

Applicable CIP code(s): 15.0403

Postsecondary course prefix, number, and title: ELM 201 – Electric Circuits II

Secondary Course(s) of Study: 431510/430059 – Alternating Current

Initial Review: Feb 22, 2011

DPE Annual Review: February 15, 2012

Effective date: Fall Semester 2011.

Course Content Analysis (all postsecondary course objectives must be sufficiently addressed in the secondary courses):

Notes:

1. Skills and knowledge contained in the postsecondary course objectives must be present in the corresponding secondary objectives for a “match” to occur.
2. Postsecondary and Secondary objectives must reflect similar content and performance levels before the course articulation agreement will be recommended to the TEDAC Oversight Committee.
3. More than one Secondary course may be used in order to articulate to a Postsecondary course.
Postsecondary Course Objectives

Module A Principles of AC Electricity

Competency:
A1.0 Explain elements of AC electrical theory.

Performance Objective
This competency is measured cognitively.

Learning Objectives:
A1.1.1 Identify the particles in an atom.
A1.1.2 State the electrical charge of the atomic particles.
A1.1.3 Define voltage, current, resistance, and power.
A1.1.4 State the units of measurement for voltage, current, resistance, and power.
A1.1.5 Describe the relationship between, voltage, current, resistance, and power.
A1.1.6 Explain the function of voltage sources.
A1.1.7 State Ohm’s Law.
A1.1.8 State the Power Law.
A1.1.9 State Kirchoff’s Law as applied to AC theory
A1.1.10 Describe the relationship between electricity and magnetism.
A1.1.11 Explain the operation of an electromagnet.
A1.1.12 Explain how magnetic induction works.
A1.1.13 Identify a sine wave.
A1.1.14 Describe period, frequency, and amplitude.
A1.1.15 State the unit of measurement for frequency.
A1.1.16 Describe peak, peak-to-peak, and effective voltage.
A1.1.17 Describe phase relationships and phase-shift
A1.1.18 Define capacitance.
A1.1.19 State the unit of measurement for capacitance.
A1.1.20 Define reactance.
A1.1.21 Define inductance.
A1.1.22 State the unit of measurement for inductance.
A1.1.23 Describe the function of an inductor in a circuit.

Secondary Course(s) and Location(s)

Alternating Current, Unit 1-2, Terminology and Symbols

Content Standards
1. Explain electrical terms, including alternating current, frequency, period, sine wave, capacitance, and inductance.
2. Interpret electrical symbols.

Examples: unit symbols, schematic symbols

Learning Objectives
1. Define and explain electrical terms.
   • Alternating current
   • Frequency
   • Period
   • Sine wave
   • Capacitance
   • Inductance
2. Identify and interpret common electrical symbols.
   Examples: unit symbols, schematic symbols

Alternating Current, Unit 3, Magnetism

Content Standards
3. Explain terms and principles of electromagnetism, including permeability, retentivity, and inductance.

Learning Objectives
1. Define magnetism.
### Competency:
A2.0  Perform tasks in a safe manner.

#### Performance Objective
A2.1  Given a variety of lab situations, perform assigned tasks in a safe manner.

#### Learning Objectives:
- A2.1.1 Identify personal protective equipment.
- A2.1.2 Explain the use of personal protective equipment.
- A2.1.3 Explain hazards associated with electrical systems.
- A2.1.4 Explain lockout/tag out procedures.

### Competency:
A3.0  Value the importance of following safety precautions.

#### Performance Objective
A3.1  This competency is measured affectively.

### MODULE B – AC Electrical Circuits

#### Competency:
B1.0  Read and interpret electrical circuits.

#### Performance Objectives:
- B1.1  Design and construct a variety of AC circuits.

#### Learning Objectives:
- 2. Explain the function of magnetism in electricity.
- 3. Define magnetic units.
- 4. Identify magnetic units.
- 5. Explain the function of magnetic units in electricity.
- 6. Define electromagnetic induction.
- 7. Identify electromagnetic units.
- 10. Explain permeability.
- 12. Explain retentivity.
- 14. Explain inductance.

### Alternating Current, Unit 4-6, Electrical Quantities Content Standards

4. Explain electrical quantities, including frequency, impedance, power, capacitance, inductance, voltage, current, watts, and periods.
5. Measure electrical units, including volts, amperes, ohms, and hertz.
6. Determine electrical quantities utilizing test equipment, including volts, frequency and period, amperes, and power.

#### Learning Objectives

*Omitted in the POI and should be added. The below were taken from the Direct Current POI*

- 7. Explain electrical quantities.
  - Voltage
  - Current
  - Resistance
  - Power
- 8. Define electrical units of measure.

**MODULE C – Circuit Testing**

**Competency:**

C1.0 Use electrical test equipment to troubleshoot electrical circuits.

**Performance Objectives**

C1.1 Given an AC circuit previously developed by the student, use various instruments to test the circuit to determine if the readings are in accordance with specifications.

**Learning Objectives**

C1.1.1 Explain the characteristics and functions of various instruments used to test electrical circuits.

C1.1.2 Explain procedures for obtaining readings from various instruments used to test electrical circuits.

**Performance Objectives**

C1.2 Given various faulty circuits or faulty readings within a circuit, determine the root cause and propose a solution.

**Learning Objectives**

C1.2.1 Describe the process for determining if a reading is correct or incorrect.

C1.2.2 Explain the procedures for determining the cause of the malfunction.

**Alternating Current, Unit 7, Ohm’s Law in AC Circuits**

Content Standards

7. Solve problems in electrical circuits using Ohm’s law, including voltage, current, impedance, and power.

**Learning Objectives**

1. Draw a schematic diagram of an AC series circuit.
2. Draw a schematic diagram of an AC parallel circuit.
3. Draw a schematic diagram of an AC Series Parallel Circuit.
4. Use common test equipment to analyze an AC series circuit.
5. Use common test equipment to analyze a parallel circuit according to specifications.
6. Use common equipment to analyze a series-parallel circuit according to specifications.
7. Use a function generator to set the required voltage and frequency for a function generator.
8. Use a digital multimeter and an oscilloscope to perform an operational checkout of an AC circuit.
9. Use a digital multimeter to troubleshoot an AC circuit and identify the malfunction.
